XINTEX provides innovative and effective solutions for the Telecommunications Industry.

"Trading Partner CrossConnect™ is a comprehensive solution for any carrier that needs to effectively, efficiently and securely interact with one or more trading partners on a daily basis."

Trading Partner CrossConnect™ (TPxC™) is the industry leading Interactive Agent solution for Communication Service Providers. A cut above the rest, it is in daily use for a wide variety of carriers both small and large nationwide.

Communication Service Providers exchange a variety of business to business (B2B) preorder and order transactions on a daily basis in large volumes. Although there exists a variety of electronic bonding approaches, XINTEX's TPxC™ was on the leading edge developing the EDI based standard that employs the Telecommunications Industry Forum (TCIF) Electronic Communications Interactive Agent functional specifications.

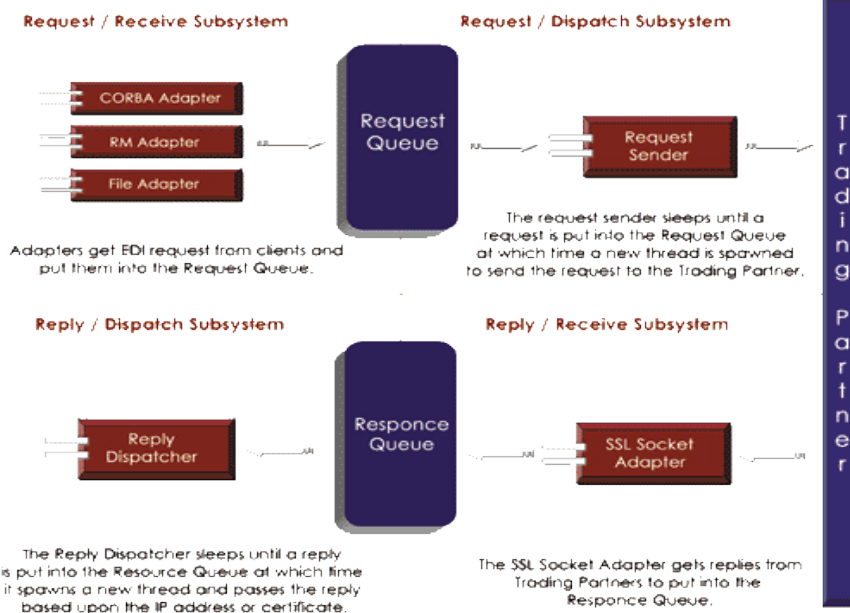

TPxC™ conforms to TCIF - 98 - 006, Issue 2 (03-17-1999) and TCIF - 98 - 006, Issue 3 (03-17-2001). XINTEX remains current on new releases as they are introduced to the communications industry. Multiple trading partners on different Issues can be configured to run concurrently in a single instance of TPxC™ thereby keeping your operations both simple and robust.

TPxC™ offers real time monitoring, alerts, and summarization of activity. Operations can **"Set It And Forget It"** - TPxC™ is on the job.

TPxC™ provides:

- Electronic bonding with all major ILECs
- The most SECURE Interactive Agent product on the market
- Runs under UNIX, Linux, or Windows
- Supports File, RMI, CORBA, and XML interfaces
- Flexible architecture allows for straight forward customization
- World Class Engineering and Support

System Architecture

Coverage

XINTEX TPxC™ has been very successfully implemented across all major ILEC (supporting both preorder and order transactions) by a wide variety of small, medium, and large carriers to provide robust, secure, and flexible interconnection.

Alarms

Carriers rely upon their trading partners to deliver services. They depend upon XINTEX TPxC™ to assure that their preorder and order activity is uninterrupted. In addition to detailed logging and tracking of all activity in this piece of the supply chain, TPxC™ will create alarms when this flow is at risk.

Highly Reliable Highly Configurable

Highly Reliable Highly Configurable

Developed in Java, XINTEX TPxC™ is extremely reliable and platform neutral—run it in UNIX, Linux or Windows. Large installations running multiple multi-threaded trading partner interfaces can run for months on a single instance.

TPxC™ is highly configurable. Basic configuration parameters include: IP addresses, local and trading partner Port Specifications, local and trading partner certificate specifications, log file configuration, maximum connections per trading partners, etc...

TPxC™ comes with Trading Partner Simulators that aid in quick and efficient integration and testing of the supply-chain before connecting live with a trading partner.
